SENSOR-TO -SHOOTER KIT

TWO CAPABILITIES. ONE KIT.

A coordinated sensor-to-shooter kit combining real-time ISR and precision effects to support the tactical kill chain. Attritable at scale, with a retrievable design that enables high-volume training and operator proficiency.

SYSTEM COMPONENTS

› Black Widow: ISR sensor node
› FANG: Precision effects UAS
› WEB GCS: Ground control station

SENSOR-TO -SHOOTER KIT

TACTICAL KILL CHAIN

BY RED CAT

Attritable. Low-Cost. Rucksack-Ready.

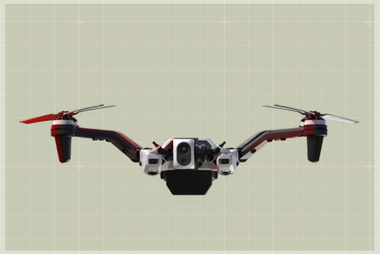

BLACK WIDOW™

Black Widow is the sensor node of the S2S kit. Purpose-built for short-range reconnaissance, it delivers real-time ISR to the operator through WEB GCS, establishing the targeting picture that initiates the kill chain. U.S.-manufactured with a modular, field-repairable architecture, Black Widow is designed for sustained, repeatable deployment at the tactical edge.

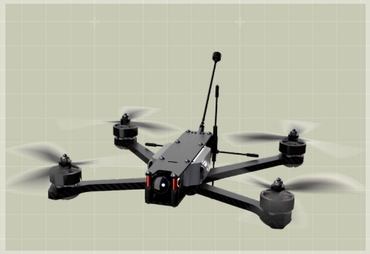

MADE IN THE USA

WEB™ GCS

WEB GCS provides command and control for Black Widow, delivering real-time ISR and situational awareness to the operator. Designed for operations at the tactical edge, WEB GCS supports reconnaissance missions by giving teams access to critical intelligence for target identification and assessment.

FANG™

FANG is the precision effects node of the S2S kit, providing the capability to engage targets identified through ISR. Available in 5-, 7-, and 10-inch configurations, its rugged carbon fiber frame and retrievable design enable high-volume training and repeated mission execution without the cost of single-use systems.
